The PowerMaster AVR protects voltage fluctuations from the incoming supply affecting your load and is designed to maintain constant set voltage at all times.

The output voltage can be monitored via the front panel analogue voltmeter and certain models are provided with high and low voltage LED indicator alarms.

The PowerMaster range includes single and three phase models and can be supplied with phase or phase & neutral options.

Wide input voltage range models are available and the standard output voltage range of these may be altered upon request.

- Top servo motor designed voltage regulation system
- Single and 3 phase options
- Wide power and voltage interval
- High reliability thanks to Microprocessor and Smart Driver
- Fast regulation
- High efficiency
- Load transfer to bypass via pole charge switch
- Safe and economic usage
- Overcurrent and overload protection
- True RMS digitally displayed status, input & output measurements
- Smart fan cooling system
- Smart short circuit protection on system output line
